

Water Resource Impacts: Town of Newmarket (acres)							
Resource Type	Ni	Sea Lev	Sea Level + Storm Surge Scenarios				
	Name/Type	1.7 feet	4.0 feet	6.3 feet			
Wellhead Protection Areas	Moody Point: Cushing Road	79.58	103.43	123.08			
F	Estuarine and Marine Deepwater	0.97	1.00	1.03			
Estuarine and Marine Wetlands	Estuarine and Marine Wetland	71.93	72.27	72.39			
	Freshwater Emergent Wetland	0.80	1.76	2.04			
	Freshwater Forested/Shrub Wetland	27.95	32.17	39.28			
Freshwater Wetlands	Freshwater Pond	1.77	3.21	4.16			
	Lake	0.00	0.00	0.00			
	Riverine	0.00	0.00	0.00			
Aquifers	Stratified Drift	0.00	0.00	0.00			

Water Resource Totals (acres)					
December Time	Sea Level + Storm Surge Scenarios				
Resource Type	1.7 feet	4.0 feet	6.3 feet		
Wellhead Protection Areas	79.58	103.43	123.08		
Estuarine and Marine Wetlands	72.90	73.27	73.42		
Freshwater Wetlands	30.52	37.14	45.48		
Stratified Drift Aquifers	0.00	0.00	0.00		
Total(s) Combined	183.00	213.84	241.98		

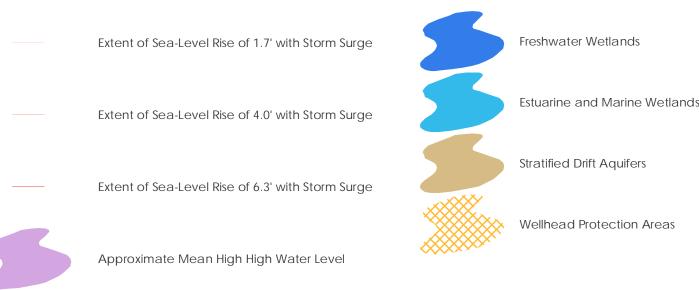

The Climate Risk in the Seacoast: Assessing Vulnerability of Municipal Assets and Resources to Climate Change (C-RiSe) project provides maps and assessments of flood impacts to infrastructure and natural resources in the coastal Great Bay region associated with projected increases in storm surge, sea level, and precipitation.

Sea-Level Rise Scenarios

Please note that the sea-level rise scenarios used in this assessment were derived from the Wake, 2011 report (refer to table of values below from this report). These scenarios were selected prior to the release of the Science and Technical Advisory Panel Report to the N.H. Coastal Risks & Hazards Commission, in August, 2014 [1]. While slightly different than the scenarios cited in that report, they yield coverage estimates that are within the mapping margin of error.

[1] Wake CP, Kirshen P, Huber M, Knuuti K, and Stampone M (2014) Sea-level Rise, Storm Surges, and Extreme Precipitation in Coastal New Hampshire: Analysis of Past and Projected Future Trends, prepared by the Science and Technical Advisory Panel (STAP) for the New Hampshire Coastal Risks and Hazards Commission.

	2050		2100	
	Lower	Higher	Lower	Higher
Current Elevation of MHHW a,b	4.4	4.4	4.4	4.4
100-Year Flood Height	6.8	6.8	6.8	6.8
Subsidence	0.0	0.0	0.0	0.0
Eustatic SLR	1.0	1.7	2.5	6.3
Total Stillwater Elevation ac	12.2	12.9	13.7	17.5
a - NAVD: North American Vertical Datum of b - MHHW: Mean Higher High Water at Fort	1988			

c - Total Stillwater Elevation may not equal total of components due to rounding

Table 13. Estimates (in feet) of future 100-year flood Stillwater elevations at Fort Point under lower and higher emission scenarios (relative to NAVD88) based on the statistical analysis presented in this report. Wake CP, E Burakowski, E Kelsey, K Hayhoe, A Stoner, C Watson, E Douglas (2011) Climate Change in the Piscataqua/Great Bay Region: Past, Present, and Future. Carbon Solutions New England Report for the Great Bay (New Hampshire) Stewards."

Data sets were retrieved from the NH GRANIT database, December, 2015. Digital data in NH GRANIT represent the efforts of the contributing agencies to record information from the cited source materials. Earth Systems Research Center (ESRC), under contract to the Office of Energy & Planning (OEP), and in consultation with cooperating agencies, maintains a continuing program to identify and correct errors in these data. Neither OEP nor ERSC make any claim as to the validity or reliability or to any implied uses of these data.

The C-RiSe project is funded by the National Oceanic and Atmospheric Administration under the Coastal Zone Management Act (CZMA)
